M600	M600 by Maytronics - made in israel	\$2,099.99	\$1,799.99

Your required hose length depends on where you attached your unit, compared to the farthest portion of your pool. For hose extension, see the other sign.

*** Rebates: Check with your salesperson. Factory rebates are not always available, and sometimes they require that you trade in an old cleaner.**

Pressure side: Best at leaves, bugs, and larger items. Does not require a strong filter, does not clog the filter. Works on water pressure returning to the pool.

Suction side: Best at dust, pollen, and silt. Requires a decent filter, and will slow down as it clogs the filter. It is just like your normal vacuuming. Works on water being sucked into the skimmer. Usually requires the water temperature to be at least 70°F in order for the hoses to be flexible enough to run properly.

Robot: Excellent at everything. Completely independent of the filter; works on low voltage electricity via a transformer from 110V (included). Generally, one motor moves the unit, while a separate motor pumps through an extremely fine filter. Easiest to set-up and operate.
